**In The Claims**

Claims 21-32 are pending in the application with claims 21, 22, 27, and 28 amended herein.

Claims 1-20 (cancelled).

21. (currently amended) A method for producing a layer of a phase change ink on a surface of a substrate, which comprises:

forming a phase change ink composition in the solid phase, the phase change ink composition comprising a phase change carrier composition and a colorant material; said phase change carrier composition comprising a non-polymeric urethane resin that is the reaction product of at least one fused ring alcohol and an isocyanate, the fused ring alcohol including at least three fused rings;

melting the ink;

applying the melted ink to at least one surface of a substrate; and  
solidifying the applied ink on the surface of the substrate.

22. (currently amended) The method of claim 21 wherein the fused-ring alcohols ~~consist of~~ comprise monohydric alcohols.

23. (original) The method of claim 21 wherein the fused-ring alcohols which include at least three fused rings consist of monohydric alcohols.

*Application No. 10/804,495*

24. (previously presented) The method of claim 21 wherein the fused-ring alcohols include one or more of hydroabietyl alcohol, methyl ester of hydrogenated rosin, or decarboxylated rosin.

25. (previously presented) The method of claim 21 wherein the fused-ring alcohols include one or more of hydroabietyl alcohol, methyl ester of hydrogenated rosin, or decarboxylated rosin; and the isocyanates comprise isophorone diisocyanate.

26. (previously presented) The method of claim 21 wherein the alcohols consist of one or more of hydroabietyl alcohol, methyl ester of hydrogenated rosin, or decarboxylated rosin; and the isocyanates consist of isophorone diisocyanate.

27. (currently amended) A method of forming a phase change ink, comprising:

reacting one or more alcohols with one or more isocyanates, the alcohols comprising fused-ring alcohols which include at least three fused rings, and producing a non-polymeric urethane resin; and  
including the resin in a phase change ink composition.

28. (currently amended) The method of claim 27 wherein the fused-ring alcohols ~~consist of~~ comprise monohydric alcohols.

29. (original) The method of claim 27 wherein the fused-ring alcohols which include at least three fused rings consist of monohydric alcohols.

*Application No. 10/804,495*

30. (previously presented) The method of claim 27 wherein the fused-ring alcohols include one or more of hydroabietyl alcohol, methyl ester of hydrogenated rosin, or decarboxylated rosin.

31. (previously presented) The method of claim 27 wherein the fused-ring alcohols include one or more of hydroabietyl alcohol, methyl ester of hydrogenated rosin, or decarboxylated rosin; and the isocyanates comprise isophorone diisocyanate.

32. (previously presented) The method of claim 27 wherein the alcohols consist of one or more of hydroabietyl alcohol, methyl ester of hydrogenated rosin, or decarboxylated rosin; and the isocyanates consist of isophorone diisocyanate.

Claims 33-44 (cancelled).
